ZyXEL

More control over your network

The ZyXEL GS2210 Agile L2 Access Switch – Fully managed switches with CLI

High speed secure networking, optimised for seamless data, voice and video convergence

With the right technology, converging data, voice and video traffic onto a single network can lead to huge financial savings for your enterprise as well as faster, more efficient communications and simplified IT management.

But, if the technology employed isn't up to the job, implementing convergence can lead to frustrated users, dissatisfied customers and a network management headache.

The ZyXEL GS2210 brings together more than 10 years' experience, insight and expertise gained working in the converged data arena. It combines industry leading traffic shaping, network isolation and security to ensure optimal performance for your voice, data and video applications, as well as the simplified installation, management, and power-saving features ZyXEL products are renowned for.

CLI Command Line Interface

› **Manage switches faster via command line**

› **Highly efficient for rolling out new configurations on multiple switches**

› **ZyXEL CLI is consistent troughout all models of the 2210, 3700 and 3900 Series**

NEW

GS2210 Series
24/48-port GbE L2 Switch

10 reasons to buy

01 **No jitter, no delay no packet loss** – Featuring either 28 or 50 non-blocking full Gigabit Ethernet ports with industry leading traffic shaping, the 2210 smart switch will transmit your data, voice and video, in real time without a glitch.

02 **No downtime** – Automatic CPU protection prevents malicious attacks from interrupting your network communications and a dual-image, dual-firmware design practically eliminates the risk of network downtime.

03 **Power where you need it** – High-power PoE ports supply up to 30 watts of power per port, ensuring a simple and cost effective installation for all your PoE devices, including advanced Power Devices such as new IP phones, cameras and access points.

04 **Cut energy bills with efficient power management** – Intelligent PoE technology means the GS2210 can automatically detect the power requirements of each PoE device and supply only what is needed, minimising overall power consumption while maximising the number of devices the switch can power.

05 **Fully future-proofed** – Full IPv6 support with features including auto-configuration, duplicate address prevention, dual-stack and neighbour discovery will ensure your investment is protected.

06 **Cost effective configuration and monitoring** – Our efficient command line makes multi-device configurations quick and easy, while SNMP and Telnet support allow you to integrate your converged network into your enterprise management and monitoring software.

07 **A window to your network** – Streamline the initial set-up of multiple switches and access points with ZyXEL ZON Utility; providing window-based software that allows for easy IP assignment and firmware updates. One Network further simplifies network management with a centralised view of all connected ZyXEL devices through their GUI. From here, PoE models can be factory reset and connected remotely to speed up network troubleshooting.

08 **High level security to safeguard your converged network** – The GS2210 has an extensive array of access control, traffic security and network storm protection features, as well as L2, L3 and L4 filtering. Education and hospitality-friendly features such as MAC freeze, port isolation and guest VLANs ensure your data assets and your network users' privacy are always protected.

09 **Optimised for high bandwidth multimedia applications** – High definition video streaming, VoIP and IPTV applications need high bandwidth connectivity with optimized Quality of Service (QoS) to ensure slick, glitch-free video. The GS2210 has extensive QoS features to provide effective bandwidth prioritisation and control, ensuring a perfect picture.

10 **Outstanding ROI** – With the right technology, optimizing your network for Data, Voice and Video Convergence will provide huge savings to your business. The GS2210 delivers all the speed, throughput and cutting-edge features needed to ensure efficient, secure and seamless convergence at an unbeatable price.
